
FIRESILX Ruffled Fan Palm, artificial, Class B, s2, d0 low flammability, 140cm

Exotic touches for sophisticated interior spaces

réf. : 82558400
GTIN: 767870933394

Description:

For those looking for something truly distinctive in interior greenery, the Ruffled Fan Palm (*Licuala grandis*) is a rare and remarkable choice. Its extraordinary appearance sets it apart from traditional palm varieties, making it a stylish focal point for sophisticated design concepts.

Its defining feature is its large, hand-shaped leaves with finely serrated edges, which can reach impressive sizes in their natural habitat. The fan-like leaf structure gives the plant an elegant, almost sculptural presence and creates an exclusive visual appeal. Standing 140 cm tall, the Ruffled Fan Palm adds decorative accents and brings a touch of tropical flair to hotels, lounges, reception areas, wellness environments, and upscale residential interiors. Its distinctive growth habit allows it to make an impact both as a standalone feature and when combined with other greenery. At the same time, it offers an attractive alternative to more commonly used palm varieties, giving spaces a unique character and a memorable visual identity. A true hidden gem.

Thanks to its flame-retardant B1 construction, this artificial plant is also suitable for environments where specific fire safety regulations must be observed. In public facilities, office buildings, trade show installations, hotels, and event venues, this decorative palm provides attractive greenery solutions even under demanding conditions.

The plant is supplied with a basic nursery pot that provides stable support when placed inside a decorative planter.

Caractéristiques:

- B1 difficilement inflammable; Class B, s2, d0 low flammability
- Correspond DIN 4102-1 et EN 13501-1
- Tronc en fibres de palmier
- Flexible
- L'article est livré avec prêt à poser

Logistique

EAN / GTIN: 767870933394
